ORDER MANAGEMENT SYSTEM

Staff User Guide

What each role can do, how every workflow runs from order to payment, what can happen at each step, the limits of the system, and how to fix common problems.

Administrator | Operation Manager | Client Service Manager | Production Manager | Production Team | Accountant | Cost Control Manager | Paster | Helper | Driver

Version 1.0 · November 2026

PART A · START HERE

A1. How to use this guide

A2. Signing in, profile and notifications

A3. Words used in the system

A4. How the whole business flows

A5. Who can do what

PART B · ROLE GUIDES

1. Administrator

2. Operation Manager

3. Client Service Manager (CSM)

4. Production Manager

5. Production Team

6. Accountant

7. Cost Control Manager

8. Field Staff: Paster, Helper, Driver

PART C · REFERENCE

C1. Every status and what it means

C2. Payment request routes in detail

C3. Line remarks and amount changes

C4. Limits and numbers to remember

C5. Common problems for everyone

C6. Support and contacts

A1. How to use this guide

Read Part A first. It explains signing in, the common words and how work moves between teams. Then read the chapter for **your own role** in Part B. Each role chapter has the same sections:

Section	What it tells you
Your menu	Every page you see in the left menu and what it is for.
Step by step	How to do each task, in order, with the button names you will see.
What can happen	Every result of your action, and who is told next.
Limits	What the system does not let you do, and why.
If something goes wrong	The message you may see, why it appears, and what to do.

> **TIP**
> Every dashboard number is a link. Click it to open the list behind it. Most pages also have a small guide (**How this page works**) that explains each figure.

> **NOTE**
> Items marked NEW are part of the latest update. If you do not see them yet, your system has not received that update. Ask the support contact on the last page.

A2. Signing in, profile and notifications

Sign in

Login page

1. Open the company OMS link given to you by the Administrator. It works on a computer and on a phone.
2. Enter your **username** and **password**. Both are given to you by the Administrator.
3. Press **Sign in**. The system opens your own home page. Each role has a different home page.

You stay signed in for 7 days on that device. Use **Sign out** at the bottom of the menu on shared computers.

Your profile

Menu › Profile

- **Change your password.** Enter the current password, then the new one.
- **Profile photo.** Upload a photo of yourself (up to 512 KB). You can also remove it.
- **WhatsApp messages.** You can stop or allow WhatsApp messages. You still get every in-app notification.
- **Name, username, email and mobile** are set by the Administrator. You cannot change them yourself. Ask the Administrator if one is wrong.

Notifications

Menu › Notifications

The system tells you when something needs you or when your work moves on. Notifications come three ways:

Channel	How it works
In-app	Always on. The Notifications page shows every message. Open one to mark it read.
WhatsApp	Sent to the mobile number on your account. Each message has an **Open in app** button that takes you straight to the item. If you are signed out, you sign in first and then land on the item.
Email	Order events (created, edited, flagged, billed) and Excel exports go to the email on your account.

> GOOD TO KNOW
>
> WhatsApp never holds up your work. If a WhatsApp message fails or your number is missing, the action still saves and the in-app notification still arrives.

Using the system on a phone

- Office roles: tap the **menu button** (three lines) at the top left to open the menu.
- Field staff: a **tab bar** at the bottom shows Work, Leave, Payments, Alerts and Profile.
- Light and dark themes are both available. Your choice is remembered.
- If a page looks out of date, reload it. Another person may have changed it.

If you cannot sign in

Message you see	Why	What to do
`Invalid username or password`	The username or password is wrong. Passwords are case-sensitive.	Check Caps Lock and try again. If you forgot the password, ask the Administrator to reset it.
`Account is inactive. Please contact the administrator.`	Your account was switched off.	Contact the Administrator or support.
`Too many attempts / request failed`	After 10 sign-in tries in 15 minutes from one network, sign-in pauses for 15 minutes.	Wait 15 minutes, then try once with the correct details.
`Page keeps loading on first open in the morning`	The server wakes up after a quiet period. This can take up to a minute.	Wait one minute and reload. If it still fails, call support.

A3. Words used in the system

Word	Meaning
Order	One customer job. It has an order number like `ORD260145`: `ORD`, the year the financial year started (26 = April 2026 to March 2027), and a running number. Numbers restart each financial year.
Store	One location inside an order (store name plus location). An order has 1 to 50 stores. Each store can have its own PO number.
Line item	One printed piece on a store: media, width and height in inches, quantity and rate.
SFT	Square feet. The system works it out: **Width × Height × Qty ÷ 144**. **Amount = SFT × Rate**.
Job PO / Store PO	The customer's purchase order number for the whole order, or for one store.
Flag	A mark on a line item that says "this line is wrong". A flagged line cannot be finished by production until an Admin resolves the flag.
Remark	The billing reason on a line: Normal, Reprint, Sample, Under Warranty, Free of Cost, Revised, Extra Amount, Less Amount or Other. See C3.
Invoice	A bill raised by Accounts on one or more stores of an order.
Field job	Work given to a field team (Pasters, Helpers, Driver) for set dates, usually to install an order.
CSM code	The CSM's employee code (for example `300`). It shows on the Weekly Grid so everyone knows whose job it is.
Payment request	Money the company pays *to you* by UPI for work expenses (travel, material, labour, food, advance, other). It is not customer money.
UTR	The bank reference number of a UPI payment.
Working days	Monday to Saturday. Sundays are not counted in any timer or overdue count.
Financial year (FY)	1 April to 31 March.
Overdue	Waiting longer than the allowed number of working days. Shown in red.

A4. How the whole business flows

Three workflows run side by side. Each one involves several roles. Knowing the full picture helps you see who is waiting on you.

Workflow 1 · Order to cash

CSM creates order (stores + line items) › Production Manager assigns (items to production staff) › Production completes (each item) › CSM marks installed (store by store) › Accounts raises invoice › Accounts records payment › Payment Received

Side paths: billed or paid short Pending, then Accounts follows up and the Admin closes it Completed. The Admin can force-close any order with a reason.

Order stages on the dashboards

While an order is Active, dashboards show where it is waiting:

Stage	Meaning	Who acts next
Not assigned	No production work has been given out yet.	Production Manager
Production	Items are assigned and some are still open.	Production Team
Installation	Production is done. Waiting for installation.	Field team, then the CSM
Billing	Installed. Waiting for an invoice.	Accountant
Payment	Billed. Waiting for customer payment.	Accountant

Turn-around time is counted in working days. Each stage shows an age badge, and the Admin's **Overdue Orders** page lists orders stuck too long.

Workflow 2 · Field work

Admin / Operation Manager assigns a job (dates, CSM, team, place) › Team is notified (in-app + WhatsApp) › Field staff: Start job (from the start date) › Field staff: Mark completed

Managers can put a job On hold, Cancel it (this frees the team's dates) or reopen a completed job. The CSM is told when a team is assigned and when the job is done.

Workflow 3 · Payment requests (expenses paid to staff)

CSM or field staff raises request (on an eligible order) › Admin review (when the route needs it) › Cost Control review › Payment pending › Paid by UPI › Closed

Any reviewer can Reject (with a reason) or Return for info. A returned request is fixed and resubmitted by the requester. Full routes are in C2.

Supporting registers

Leave

Field staff ask for leave. The Operation Manager or Admin approves or rejects it. Approved leave blocks that person from being booked on jobs.

Overtime

The Operation Manager or Admin logs overtime. Only the Admin approves or rejects it. Each person sees their own overtime.

A5. Who can do what

● can do ◐ only own records or with limits – cannot. Admin = Administrator, OM = Operation Manager, PM = Production Manager, Prod = Production Team, Acc = Accountant, CCM = Cost Control Manager, Field = Paster, Helper, Driver.

Action	Admin	OM	CSM	PM	Prod	Acc	CCM	Field
View orders	●	●	◐	●	◐	●	–	–
Create orders, add stores and lines	●	–	●	–	–	–	–	–
Upload orders from Excel	●	–	●	–	–	–	–	–
Flag a line item	●	–	●	–	–	–	–	–
Set line remarks / approve amount changes	●	–	◐ ask	–	–	–	–	–
Assign items to production	●	–	–	●	–	–	–	–
Complete production items	●	–	–	●	◐	–	–	–
Mark a store installed	●	–	◐	–	–	–	–	–

Add billing follow-ups	●	–	●	–	–	●	–	–
Close / force-close orders	●	–	–	–	–	–	–	–
Export / email orders to Excel	●	●	●	–	–	●	–	–
Assign field jobs, Daily Board, Weekly Grid	●	●	◐ own jobs	–	–	–	–	◐ own
Start / complete a field job	●	●	–	–	–	–	–	◐ own
Record and decide leave	●	●	–	–	–	–	–	◐ ask
Log overtime	●	●	–	–	–	–	–	◐ view
Approve overtime	●	–	–	–	–	–	–	–
Field staff accounts and masters	●	●	–	–	–	–	–	–
Raise payment requests	–	–	◐	–	–	–	–	◐
Review payment requests	◐ Admin stage	–	–	–	–	–	◐ CCM stage	–
Mark paid, close payment requests	◐*	–	–	–	–	–	●	–
Users, Settings, WhatsApp log	●	–	–	–	–	–	–	–
Reports, Overdue, Loss, Audit	●	●	–	–	–	◐ finance	–	–

* The Admin acts for Cost Control only while no Cost Control Manager account is active, so payouts never stop. Creating and editing office users, deleting orders and Bulk Import need a **super admin** Administrator account.

1 Administrator

Runs the business. Sees everything, approves money and exceptions, and keeps the system set up.

Home: Admin Dashboard
Portal: /admin

Your menu

Page	What it is for
Dashboard	Whole-business picture: orders by stage, overdue work, payments waiting, field teams. Every figure opens its list.
Automated System (orders)	
Orders	All orders. Open one to edit, resolve flags, set remarks, close or force-close it. **Start order** creates an order for a CSM.
Overdue Orders	Orders that have waited too long in a stage, in working days.
Loss Report	Lines not billed (Reprint, Sample, Under Warranty, Free of Cost, Other) and amount changes (Revised, Extra, Less).
Reports	Business reports with Excel export.
Financial Year	Totals per financial year.
Audit Logs	Who changed what and when, with before and after values.
Bulk Import	Super admin only. Loads many orders at once from the Excel template.
Users	Create, edit, switch off and reset passwords for staff accounts.
WhatsApp	Log of every WhatsApp message, with resend for failed or skipped ones.
Settings	Order number sequence, payment overdue limit, Admin review limit, reference data.
Work Allocation	
Weekly Grid · Daily Board · Field Jobs · Leave · Overtime · Field Staff · Allocation Masters	Same as the Operation Manager. See chapter 2. Only you approve overtime.
Payment Request	
Payment Requests	Your Admin review queue, with timers and an overview of where requests wait.

Step by step

Start an order for a CSM

Orders › Start order

1. Press **Start order**.
2. Enter the **client** and pick the **CSM** (only active CSMs are listed).
3. Keep the next order number, or type a custom number for this order.
4. Save. The CSM is told and adds the stores and line items.

If the number is taken you see *That order number is already used. Pick another.*

Edit an order and resolve flags

Orders › open order

1. Open the order. You can edit the header, stores and lines at any status. A CSM cannot edit settled orders, but you can.
2. A flagged line shows the CSM's reason. Press **Remove Flag** once the line is dealt with, or **Reject flag** with a note to the CSM.
3. To correct a saved line, change its size, quantity or rate and choose remark **Revised** with a reason NEW .
4. To take a line off the bill, set its remark to Reprint, Sample, Under Warranty, Free of Cost or Other.

Decide an amount change request NEW

Order › Amount changes

1. A CSM asks for an **Extra Amount** or **Less Amount** on a line or on the whole order. You get a notification.
2. Open the order. Check the reason and the figure the CSM suggests. You can change the figure.
3. For Less Amount, choose whether you enter the **new amount** or the **discount**.
4. **Approve**, or **Reject** with a reason. The CSM is told either way.

If the order is already invoiced and the change breaks the billed total, the order moves to Pending and Accounts is told.

Close or force-close an order

Order › Actions

1. **Close** works only on a Pending order (billed or paid short). Choose a remark and add text if you pick Other.
2. **Force close** works at any status. Use it when an order must stop, for example a sample or warranty job. Choose the reason.
3. The order becomes Completed. This is final.

> BEFORE YOU CLOSE
> Check for open field jobs and payment requests on the order. Closing does not cancel them.

Review a payment request (Admin stage)

Payment Requests

1. Open a request in **Admin review**. Check the order, amount, purpose, payee UPI and any files.
2. Choose one: **Approve** (goes to Cost Control), **Return for info** (reason required; goes back to the requester), or **Reject** (reason required; final).
3. While a request is under review you may also **Cancel** it with a reason.

Requests above the Admin review limit (default ₹5,000) always come to you first, whatever bill option was chosen.

Manage users

Users · super admin

1. Add a user. Enter name, username, mobile, email, password and role. Mobile and email are required.
2. To fix someone's details, edit the user. Staff cannot change their own username, email or mobile.
3. To stop access, switch the user **inactive**. They lose access on their next action. Prefer this to deleting: users with history are kept for the audit trail.
4. To reset a password, use **Reset password** and give the new password to the person privately.

Settings

Settings

Setting	What it does
Order Number Sequence	Shows the current prefix and next number. **Adjust Next Order Number** sets it. **Lock sequence adjustments** prevents manual overrides.
Payment request overdue limit	Working days before a waiting request turns red. Whole number 1 to 90. Default 10.
Admin review limit for payment requests	Requests above this amount always start with the Admin. Default ₹5,000. Exactly ₹5,000 follows the normal route.

Bulk Import

Bulk Import · super admin

1. Download the order sheet template. Fill one order per client.
2. Upload. The system shows a **preview** with any errors per row.
3. Fix errors and upload again. Import is **all or nothing**: if one row fails, nothing is saved.

Serial No, Order No, Total SFT and Amount in the sheet are ignored. The system works them out.

WhatsApp log

WhatsApp

Every message has a status: Queued, Sent, Delivered, Read, Failed, Skipped or Logged. **Skipped** means the person opted out or has no valid mobile. **Logged** means WhatsApp is in test mode and nothing was sent. Use **Resend** on Failed or Skipped messages after fixing the cause.

Limits

THE SYSTEM WILL NOT LET YOU

- Close an order that is not Pending. Use Force close instead.
- Delete an order that has payment requests, field jobs or a correction history. Close it instead.
- Mark a payment request paid or closed while an active Cost Control Manager exists. That is their job.
- Correct a payout after it is marked paid. Bounced or wrong payments are fixed outside the system with Accounts.
- Undo a Completed order or a Cancelled field job.

If something goes wrong

Message you see	Why	What to do
`Only pending orders can be closed.`	The order is not in Pending.	Use Force close with a reason.
`This order has a history of corrections. Close it instead of deleting it.`	Deleting would lose the audit history.	Force close the order.
`That order number is already used. Pick another.`	Order numbers are unique.	Use the suggested next number or another free one.
`Exports can only be emailed to approved company domains.`	Exports go only to company email addresses.	Use a company address, or download the Excel file instead.
`Someone else changed this request just now. Reload and try again.`	Two people acted on one request at once.	Reload the page and check the new status before acting.

2 Operation Manager

Runs the field teams: assigns jobs, records leave and overtime, keeps field staff and masters up to date. Watches orders read-only.

Home: Admin Dashboard
Portal: /admin (orders read-only)

Your menu

Page	What it is for
Dashboard	**Assign Work** shortcut, filters by date range and area, free Pasters and Helpers, and tiles for Hyderabad, Non-local and Not set jobs. Click a tile to see jobs grouped by area.
Orders, Overdue, Loss Report, Reports, Financial Year, Audit Logs	View only. You can export to Excel. You cannot change orders or billing.
Weekly Grid	Who works where, day by day. Filter All / Pasters / Helpers / Drivers. Each box shows order number, CSM, Paster and Driver. Click a box for full details; team and work details can be edited there.
Daily Board	One day at a glance: who is busy, free or on leave.
Field Jobs	All jobs as a list. Create, edit and change status.
Leave	Record leave and decide field staff leave requests.
Overtime	Log overtime for up to 5 people at once. The Admin approves.
Field Staff	Create, edit, switch off and reset passwords for Pasters, Helpers and Drivers.
Allocation Masters	Areas (with locality), vehicles and CSM codes.

Step by step

Assign a field job

Dashboard › Assign Work

1. **Dates.** Pick the start date and end date. Required. One job runs whole days, at most 62 days.
2. **CSM.** Pick the CSM. Required. Choosing an order fills it in for you.
3. **Order.** Optional. Pick the order and, if you like, which of its stores. The order can be linked later by you, the Admin or the job's CSM.
4. **Location.** Optional: Hyderabad or Non-local, plus an area name. Type freely; suggestions come from the Area master and new names are added to it.
5. **Team.** Pick 1 or 2 **Pasters**, exactly 1 **Driver**, and set Helpers to **Required** (1 or 2) or **Not required**.
6. **Vehicle** and extra details (route, second CSM, grid tag, instructions) are optional.
7. Save. The team gets an in-app and WhatsApp message. The CSM is told a team was assigned.

BUSY PEOPLE

A person already booked on those dates shows a warning. You can still pick them: saving books them on both jobs (**Book anyway as a 2nd job**). People on **approved leave** cannot be picked at all.

Change a job's status

Field Jobs › open job

From	You can move it to
Assigned	Started, On hold, Cancelled
Started	Completed, On hold, Cancelled
On hold	Assigned, Started, Cancelled
Completed	Started (reopen)
Cancelled	Nothing. Final. Cancelling frees the team's dates. A reason is required.

Details and team can be edited only while the job is Assigned, Started or On hold.

Record or decide leave

Leave

1. **Record leave** for a Paster, Helper or Driver. Leave you record is approved at once. One record covers at most 120 days.
2. If the person is on jobs on those days, the system warns you. Tick the box to save anyway, then rearrange the jobs.
3. **Requests** from field staff arrive as Pending. Approve (acknowledge any job clash) or Reject with a reason.
4. To take back approved leave, **Cancel** it with a reason. Rejected or cancelled leave cannot be edited; record new leave instead.

Log overtime

Overtime

1. Pick up to 5 people, the work date, start time and close time. Optionally link a job.
2. Hours are worked out from the times. A close time at or before the start time means work ran past midnight.
3. Save. Entries are Pending until the Admin approves or rejects them. You can edit or delete only pending entries.

Field staff and masters

Field Staff · Masters

- Add a field staff member with name, username, role, mobile, email and password. Mobile and email are required for new accounts.
- Switch staff off when they leave. Reset passwords when they forget.
- Keep **areas**, **vehicles** and **CSM codes** correct. Each code, area name and vehicle number must be unique.

Limits

THE SYSTEM WILL NOT LET YOU

- Change orders, billing, users or settings. Those pages are view only for you.
- Approve or reject overtime. Only the Admin can.
- Book someone on approved leave, or log overtime on their leave day.
- Put more than 2 Pasters, 2 Helpers or 1 Driver on a job.
- Move a job to another order if that order already has payment requests from the job.

If something goes wrong

Message you see	Why	What to do
`Pick a Paster. / Pick a Driver.`	Every job needs at least one Paster and one Driver.	Add them to the team.
`Someone on this team was just booked on another job for these dates. Reload and try again.`	Another manager booked the same person a moment ago.	Reload, then pick someone free or use Book anyway as a 2nd job.
`This person already has leave on some of these days.`	Leave records for one person cannot overlap.	Edit the existing leave instead.
`This person already has overtime logged for part of that time.`	Overtime for one person cannot overlap.	Check the existing entry and adjust the times.
`The second CSM code must differ from the first CSM's.`	Both CSM codes are the same.	Pick a different second CSM or leave it empty.
`Request failed with status code 403`	You tried to change something that is view only for you.	Ask the Admin to make the change.

3 Client Service Manager (CSM)

Owns the customer order: creates it, keeps it correct, confirms installation, follows up billing, and claims work expenses.

Home: CSM Dashboard
Portal: /employee

Your menu

Page	What it is for
Dashboard	Your orders by stage and what is waiting on you.
New Order	Create an order with stores and line items.
Upload Orders	Create orders from the Excel order sheet. One order per client.
My Orders	Your orders. Open one to edit, flag lines, mark stores installed, follow up and export.
Field Jobs	Field jobs where you are the CSM. Add work details or link the order.
Payment Requests	Claim expenses on your orders and track them.

Step by step

Create a new order

New Order

1. Enter the **client** and the **Job PO** if the customer gave one.
2. Add a **store**: store name (for example *Fabindia Inorbit Mall*), location (for example *Madhapur*) and Store PO if any.
3. Add **line items** to the store: media, width and height in inches, quantity and rate per SFT. SFT and amount are worked out for you.
4. Add more stores the same way. You can also fill every store at once from an order sheet.
5. Submit. The order number is given on submit. Accounts and the Admin are told, and you get an email.

> **TIP**
> If the Admin started the order for you, open it from My Orders and add the stores and lines there.

Upload orders from Excel

Upload Orders

1. Download the template. Fill one order per client. The first date becomes the order date.
2. Upload the file and check the **preview**. Rows with problems are marked.
3. Fix the sheet if needed and upload again. Then confirm to create the orders.

Serial No, Order No, Total SFT and Amount are ignored and worked out. Store Name and Location are saved exactly as typed in their columns.

Correct an order

My Orders › open order

- **Header fields** (client, PO and so on) can be edited until the order is settled.
- **Stores** can be added, renamed or removed until billing starts. Remove a store's lines before removing the store.
- **New lines** can be added while the order is Active or Installed.
- **Saved lines cannot be edited or removed.** If one is wrong: **flag** it with a reason (for example *Dimensions incorrect*) and add a corrected line. The Admin resolves the flag.

Mark a store installed

Order › store

1. Wait until every production item of the store is complete.
2. Mark that store **installed**. Only the CSM who owns the order (or the Admin) can do this.
3. When every store is installed the order becomes Installed and goes to Accounts for billing.

A store with no production work goes straight to billing; it does not need to be marked installed.

Ask for an amount change NEW

Order › Amount changes

1. Press **Ask for an amount change**. Choose **Extra Amount** or **Less Amount**, for one line or for the whole order.
2. Enter the reason (required) and, if you like, the figure you suggest.
3. Press **Send to admin**. The Admin approves (and may change the figure) or rejects with a reason. You are told either way.

Follow up billing, export

Order

- After billing you can add **follow-up notes** (calls, promises to pay). Accounts sees them.
- Export your orders to Excel, or email the export to a company email address.

Field jobs on your orders

Field Jobs

Jobs where you are the CSM appear here. You can add **work details** (for example *Flex fixing and glow sign installation at 3 stores*) and **link one of your orders** if the job was booked without one. You are told when a team is assigned and when the job is completed.

Claim an expense

Payment Requests

1. Press **New payment request**. Search your orders. Only orders open to requests can be picked (see the rule below).
2. Fill **Field job** (optional), **amount**, **category** (Travel, Material, Labour, Food, Advance, Other) and **purpose**.
3. **Pay to.** Your UPI ID (*name@bank*) or UPI mobile number.

4. **Bill details.** *Need to submit details* goes to Cost Control; the bill must be attached before it can close. *No need to submit details* goes to the Admin first, then Cost Control.
5. Attach bills or photos now or later, then submit.

> **WHEN AN ORDER TAKES REQUESTS**
> An order opens for requests when all its production items are complete, or it is Installed, or it has no production items. It closes to *new* requests once the first invoice is raised. Requests already raised carry on.

What can happen to your request

Result	What to do
Returned for info	Read the reviewer's reason. Fix the request and **Resubmit**. If you raise the amount or change the UPI, review starts again from the beginning.
Rejected	Final. Read the reason. Raise a new request if it is right to.
Payment pending	Approved. Cost Control is sending the money.
Paid / Closed	Check your UPI. If the amount is wrong or did not arrive, contact Accounts or support. Payout errors are fixed outside the system.

You can **Cancel** your own request until someone approves it.

Limits

> **THE SYSTEM WILL NOT LET YOU**
> - Edit or delete a saved line item. Flag it and add a corrected line.
> - Add lines or stores after billing starts, or change a settled order. Ask the Admin.
> - Mark a store installed while its production items are open, or on another CSM's order.
> - Set loss remarks or change billed amounts yourself. You ask; the Admin decides.
> - Have more than 50 stores in one order, or two stores with the same name and location.

If something goes wrong

Message you see	Why	What to do
`Existing line items cannot be edited — flag it and add a corrected line instead.`	Saved lines are locked.	Flag the line with a reason and add a corrected line.
`Line items can only be added before billing starts.`	Accounts has billed the order.	Ask the Admin to add or change the line.
`This order is settled. Ask an administrator to change it.`	The order is paid or closed.	Ask the Admin.
`Only the order's creator can confirm installation.`	The order belongs to another CSM.	Ask that CSM or the Admin.
`Remove this store's line items before removing the store.`	The store still has lines.	Flag wrong lines; ask the Admin if the store must go.
`Production is still running (x of y items done).`	The order is not open to payment requests yet.	Wait until production finishes.
`Billing has started on this order, so it no longer takes new payment requests.`	An invoice exists.	Talk to the Admin if the expense is genuine.
`Follow-ups can only be added after billing is completed.`	No invoice yet.	Add follow-ups after Accounts bills the order.

4 Production Manager

Gives out production work: assigns each line item to one or more production staff and watches the team's load.

Home: Production Manager Dashboard
Portal: /prod-manager

Your menu

Page	What it is for
Dashboard	Orders waiting for assignment, work in production, and each person's workload.
Assign Work	Tick items, pick teams, assign in one go.

Step by step

Assign production work

Assign Work

1. Search by order number or client. Use **Show orders with** to see unassigned or partly assigned orders.
2. Open an order. The system suggests teams for it.
3. Tick the line items, pick one or more production staff, and save. You can also assign item by item.
4. Each person sees the items in their queue and is notified.

An item with several people is complete only when every one of them marks their part done. You can also mark items complete or reopen them yourself.

What can happen

Situation	Result
All items of a store complete	The order moves to the Installation stage. The CSM can mark the store installed.
A line is flagged by the CSM	It cannot be completed until the Admin resolves the flag. Hold that work.
A person is switched off	They no longer appear in the picker. Reassign their open items.

Limits

THE SYSTEM WILL NOT LET YOU

- Assign items to inactive users or to non-production users.
- Reassign items on closed orders.
- Create or edit orders, or change billing.

If something goes wrong

Message you see	Why	What to do
`Items can only be assigned to active production users.`	The person is inactive or not in Production.	Pick someone else, or ask the Admin to fix the account.
`Closed orders cannot be reassigned.`	The order is settled.	No action needed. Ask the Admin if work must continue.
`This item is flagged as mistaken — an admin must resolve the flag before it can be completed.`	The CSM flagged the line.	Ask the Admin to resolve the flag. Work on the corrected line instead.

5 Production Team

Produces the printed items given to you and marks each one complete.

Home: Production Dashboard
Portal: /production

Your menu

Page	What it is for
Dashboard	Your open and finished items.
Queue	My Production Queue: every item given to you, with media, size and total SFT.

Finish your work

Queue

1. Open **Queue**. Use **Show items** to switch between open and finished items.
2. Open an item to see its order and full details.
3. When it is produced, mark it **complete**. If you marked one by mistake, press **Reopen**.

LIMITS

You see only items given to you, on active orders. You cannot complete a flagged item or change anyone else's items.

Message you see	Why	What to do
`You can only update items assigned to you.`	The item belongs to another person.	Ask the Production Manager.
`This item is flagged as mistaken…`	The line is wrong and waits for the Admin.	Stop work on it. Tell the Production Manager.

6 Accountant

Bills customers, records what they pay, and follows up short payments.

Home: Accounts Dashboard
Portal: /accountant

Your menu

Page	What it is for
Dashboard	Orders to bill, payments due, money received.
Billing Queue	Orders ready to bill. Open one to raise an invoice or record a payment.
All Orders	Every order, view only, with Excel export.
Financial Reports	Billing and collection reports.
Financial Year	Totals per financial year.

Step by step

Raise an invoice

Billing Queue › open order

1. Check the order first: stores, lines, remarks and amount changes. **Order billable** shows the amount that can be billed.
2. Pick the **stores** this invoice covers. A store is ready when its production is complete and it is installed, or it has no production work.
3. Enter **Invoice Number** (for example *SBD/26-27/0142*), **Billing Date** and **Bill Amount**.
4. Save. The order becomes Awaiting Payment, or Pending if billed less than the billable amount.

Record a payment

Order › invoice

1. On the invoice, enter **Amount Received** and **Payment Date**.
2. Save. Full payment on every invoice makes the order Payment Received. A shortfall makes it Pending.
3. For a Pending order, add **follow-up** notes as you chase the customer. The Admin closes it when settled.

Mistakes: use **Edit billing** or **Edit payment**. Each invoice holds one payment record; correct it rather than adding a second.

What can happen

Situation	Result
Bill = billable, paid in full	Payment Received. Done.
Billed short or paid short	Pending. Follow up; the Admin closes with a remark.
Admin approves an amount change after billing	If the billed total no longer matches, the order moves to Pending and you are told. Check and edit billing.

Situation	Result
Only some stores billed	Raise further invoices for the remaining stores later.

Limits

THE SYSTEM WILL NOT LET YOU

- Bill more than the billable value of the stores covered.
- Put one store on two invoices, or reuse an invoice number within an order.
- Record more received than billed.
- Change store coverage of an invoice that is already paid.
- Create or edit orders, or close orders.

If something goes wrong

Message you see	Why	What to do
`Amount received cannot exceed the billed amount.`	Received is more than billed.	Check the figure. If the customer paid extra, tell the Admin.
`That invoice number already exists on this order.`	Invoice numbers are unique per order.	Use the correct new number.
`No billing record to edit — submit an invoice first.`	There is no invoice yet.	Raise the invoice.
`This invoice has been paid; its store coverage can no longer be changed.`	Payment is recorded.	Ask the Admin if a correction is needed.
`A store shows as not ready to bill`	Its production is open or it is not installed.	Check the order; ask the CSM to mark it installed.

7 Cost Control Manager

Checks expense claims, pays them by UPI, and closes them once the paperwork is complete.

Home: Cost Control Dashboard
Portal: /cost-control

Your dashboard

One page holds everything: tiles for **Waiting on you**, **To be paid**, **Overdue** and **Paid this month**, a view of where requests wait, paid amounts by category, and the request list with filters and search.

Step by step

Review a request

Dashboard › open request

1. Open a request in **Cost Control review**. Check the order, the order value, total already asked on the order, the payee and the files.
2. **Approve**: it moves to Payment pending. **Return for info**: reason required, it goes back to the requester. **Reject**: reason required, final.

A request can be approved and paid before its bill arrives. The bill is needed only to close it.

Pay and close

Request › Payment pending

1. Send the money by UPI from the company account, outside the system.
2. Press **Mark paid**. Enter the amount paid and the UTR (optional but recommended). Paying less than asked needs a reason.
3. The requester is told. When the paperwork is complete, press **Close**.

> **BEFORE YOU MARK PAID**
> If you find a problem while a request is Payment pending, you can still **Reject** it with a reason. Once marked paid it cannot be rejected or reversed in the system.

Timers and reminders

Each request shows how long it has waited at its step, in working days. After the overdue limit (default 10 working days) it turns red. Every working day after 09:30 you get one in-app summary of overdue requests waiting on you.

Limits

> **THE SYSTEM WILL NOT LET YOU**
> - Act on requests still in Admin review.
> - Pay more than the amount asked.
> - Close a *Need to submit details* request without a bill attached.
> - Undo a payment. Bounced or wrong payments are handled outside the system with Accounts.

If something goes wrong

Message you see	Why	What to do
`Attach the bill before closing: this request needs details submitted.`	No bill is attached.	Ask the requester to attach it, or attach it yourself.
`The amount paid cannot be more than the ₹… asked for.`	Paid amount is too high.	Enter the correct amount.
`Say why ₹… less than asked is being paid.`	You paid less than asked.	Add the reason.
`Only the reviewer for this stage can do that.`	The request is at Admin review.	Wait for the Admin.
`Requests on ORD… now add up to more than the order value.`	A warning, not a block.	Check carefully before approving.

8 Field Staff: Paster, Helper, Driver

Does the installation work on site. Uses the system on a phone to see jobs, start and finish them, ask for leave, and claim expenses.

Home: My Work
Portal: /field

Your tabs (bottom of the phone screen)

Tab	What it is for
Work	Your jobs: **Today**, **Coming up** and the **Last two weeks**. Each job shows the CSM (with a **Call** button), location, team and vehicle.
Leave	Ask for days off. See overtime recorded for you.
Payments	Claim expenses for your jobs and track them.
Alerts	Your notifications.
Profile	Password, photo and WhatsApp setting.

Step by step

Start and finish a job

Work

1. On the job's start date, open it and press **Start job**.
2. When the work is done, press **Mark completed**. Add a short note if needed (for example *All boards fixed; one store asked for a revisit*).
3. The CSM and the person who booked the job are told.

Need to stop or cancel a job? Call the CSM or Operation Manager. Only managers can hold, cancel or reopen jobs.

Ask for leave

Leave

1. Pick the from and to dates (today or later) and give a reason.
2. Send. The request is Pending until the Operation Manager decides. You are told the result.
3. You can **Withdraw** it while it is pending. Approved leave can only be cancelled by the Operation Manager.

Claim an expense

Payments

1. Press **New payment request**. Pick the order of one of your jobs.
2. Enter amount, category, purpose (for example *Auto fare to site, glue and tape*) and your UPI ID or UPI mobile number.
3. Choose the bill option, attach bill photos (JPG, PNG, WEBP, HEIC or PDF, up to 5 MB each), and submit.
4. Watch the status. If it is **Returned for info**, fix it and resubmit.

You can claim on orders where you are on a job that is not cancelled, and only before the order is billed.

Limits

THE SYSTEM WILL NOT LET YOU

- Start a job before its start date, or complete a job that was not started.
- See other people's jobs, leave or requests.
- Ask for leave for past dates.
- Change your mobile number or email. Ask the Operation Manager.

If something goes wrong

Message you see	Why	What to do
`This job starts on 2026-11-12. You can mark it started from that day.`	It is too early.	Start it on the start date.
`Mark the job started first.`	You pressed complete on a job not started.	Press Start job, then Mark completed.
`You are no longer on ORD…`	A manager changed the team.	Call the Operation Manager.
`Leave can be asked for from today onwards.`	A date is in the past.	Pick today or later. For past leave, tell the Operation Manager.
`You already have leave asked for or approved on …`	Those days are already requested.	Check the Leave tab.
`Files can be up to 5 MB.`	The photo is too big.	Take a new photo at lower quality, or crop it.

C1. Every status and what it means

Order status

Order status is worked out by the system from stores, items and invoices. Nobody sets it by hand, except **Completed**, which only the Admin sets.

Status	Meaning	Next step
Active	Being produced or installed.	Production, then CSM installs
Installed	All stores installed. Ready to bill.	Accountant raises invoice
Awaiting Payment	Billed in full. Waiting for the customer.	Accountant records payment
Pending	Billed short or paid short.	Follow up; Admin closes
Payment Received	Fully paid. The normal end of an order.	Nothing
Completed	Closed by the Admin with a remark. Final.	Nothing

Field job status

Status	Meaning
Assigned	Booked, not started.
Started	Team is working.
On hold	Paused by a manager.
Completed	Done. A manager can reopen it.
Cancelled	Stopped. Dates freed. Final.

Leave and overtime

Status	Meaning
Pending	Waiting for a decision. Pending leave holds the days but does not block jobs.
Approved	Leave blocks job booking and overtime that day.
Rejected	Not granted. Reason shown.
Cancelled	Taken back or withdrawn.

Payment request status

Status	Meaning	Who acts
Admin review	Waiting for the Admin.	Admin
Cost Control review	Waiting for Cost Control.	Cost Control Manager
Returned for info	Reviewer needs a fix or more detail.	Requester
Payment pending	Approved. Money to be sent.	Cost Control Manager
Paid	Money sent.	Cost Control closes
Closed	Complete. Final.	Nobody
Rejected	Refused with a reason. Final.	Nobody
Cancelled	Withdrawn. Final.	Nobody

C2. Payment request routes in detail

The route is fixed when the request is submitted. It depends on two things: the **amount** and the **bill option**.

Route A · Amount above the Admin limit (default ₹5,000), any bill option

Admin review › Cost Control review › Payment pending › Paid › Closed

Route B · Up to the limit, "No need to submit details"

Admin review › Cost Control review › Payment pending › Paid › Closed

Route C · Up to the limit, "Need to submit details"

Cost Control review › Payment pending › Paid › Closed (bill required)

Every possible move

Action	Who	When and what happens
Approve	Reviewer of the current stage	Admin review goes to Cost Control review. Cost Control review goes to Payment pending.
Return for info	Reviewer of the current stage	Reason required. Goes to the requester.
Resubmit	Requester	Goes back to the stage that returned it. If the amount went up or the UPI changed, review starts again from the beginning of the route.
Reject	Reviewer of the stage; Cost Control also during Payment pending	Reason required. Final. Not possible after Paid.
Cancel	Requester before any approval; Admin during review	Admin must give a reason. Final. After approval for payment nobody cancels; Cost Control rejects instead.
Mark paid	Cost Control Manager	From Payment pending. Paid amount up to the amount asked. UTR optional. Less than asked needs a reason.
Close	Cost Control Manager	From Paid. "Need to submit details" requests need a bill attached.

GOOD TO KNOW

- **Files:** bills, photos and receipts in JPG, PNG, WEBP, HEIC or PDF, up to 5 MB each, up to 10 per request, no duplicates. Once a request is approved its files stay, but more can be added.
- **No cap:** there is no limit on requests per order. Reviewers see a warning when requests add up to more than the order value.
- **No Cost Control Manager?** If no Cost Control Manager account is active, the Admin can do the Cost Control steps, so payouts never stop.

C3. Line remarks and amount changes

Every line has a remark. It decides how much of the line is billed. A line has one remark at a time.

Remark	Effect on the bill	Who sets it
Normal	Billed as worked out. The default.	Automatic
Reprint	Not billed. Counted as a loss.	Admin
Sample	Not billed. Counted as a loss.	Admin
Under Warranty	Not billed. Counted as a loss.	Admin
Free of Cost	Not billed. Counted as a loss.	Admin
Other	Not billed. Reason required.	Admin
Revised NEW	The Admin corrected size, quantity or rate. The new amount is billed. Not a loss. Reason required.	Admin only
Extra Amount NEW	Line amount plus the extra figure. Reason required.	CSM asks, Admin decides
Less Amount NEW	Line amount minus a discount, or a new lower amount. Reason required.	CSM asks, Admin decides

Extra and Less Amount can also apply to the **whole order**. The Loss Report shows real losses separately from amount changes. Amount changes do not affect field staff pay.

C4. Limits and numbers to remember

Rule	Value
Stores per order	1 to 50
SFT formula	Width (in) × Height (in) × Qty ÷ 144
Order number	ORD + FY start year + running number; restarts each FY
Team per field job	1–2 Pasters, 0–2 Helpers, exactly 1 Driver
Longest single field job	62 days
Longest single leave record	120 days
People per overtime entry	Up to 5
Admin review limit for payment requests	Above ₹5,000 (Admin can change)
Payment request overdue limit	10 working days (Admin can set 1–90)
Files per payment request	Up to 10, each up to 5 MB
Profile photo	Up to 512 KB
Sign-in attempts	10 per 15 minutes per network
Stay signed in	7 days
Working days	Monday to Saturday (India time)
Daily overdue reminder	After 09:30, Monday to Saturday
Excel import	One order per client; all-or-nothing for Bulk Import
Email export	Company email addresses only

What the system does not cover

OUTSIDE THE SYSTEM

- Payroll, salaries, GST and tax filing.
- Customer access. Customers never sign in.
- Correcting a payout after it is marked paid (bounced payment, wrong UTR, recovery). Handle it with Accounts and the Admin.
- Public holidays. They count as working days in timers.

C5. Common problems for everyone

Problem or message	Why	What to do
`A menu page is missing`	Each role sees only its own pages.	Check chapter A5. If you need access, ask the Admin to check your role.
`Request failed with status code 401`	You were signed out, or your session ended.	Sign in again.
`Request failed with status code 403`	Your role cannot do that action.	Ask the person whose role does it (see A5).
`… Reload and try again.`	Someone else changed the same record a moment ago.	Reload the page, check what changed, then act again.
`Invalid input`	A required field is empty or a value is not allowed.	Look for fields marked in red and correct them.
`Internal server error`	An unexpected fault.	Note the time and what you did, take a screenshot, and contact support.
`No WhatsApp message received`	No mobile on your account, WhatsApp switched off on your profile, or WhatsApp is in test mode.	Check the in-app Notifications page. Ask the Admin to check your mobile number.
`Open in app link asks me to sign in`	You were signed out on that phone.	Sign in. You are taken straight to the item.
`The number on the dashboard looks wrong`	The page may be out of date.	Reload. Click the number to see the list behind it.
`Wrong name, mobile or email on my account`	Only the Admin (or the Operation Manager, for field staff) can change them.	Ask them to update it.

Before you contact support

1. Reload the page and try once more.
2. Note the **order number** or request, your **username**, and the **exact message**.
3. Take a screenshot if you can.
4. Contact support with these details. This makes the fix much faster.

C6. Support and contacts

Stuck, unsure, or seeing something that looks wrong? Get in touch. Share your username, the order or request number, and the exact message you see.

For any queries about the OMS

Email pranav.motesha@gmail.com

Phone +91 78939 53183

Account access, password resets and role changes can also be handled by your Administrator.

Who to ask first

- Password, account, role: Administrator
- Field jobs, leave, overtime: Operation Manager
- Production work: Production Manager
- Billing questions: Accountant
- Expense payouts: Cost Control Manager

Contact support directly for

- Error messages not listed in this guide
- Internal server error
- The system not opening at all
- Anything that looks like wrong data
